

Application No.: 10/632,663

Docket No.: NY-LUD 5673.1 US (10307606)

AMENDMENTS TO THE CLAIMS

Claim 1. (Original) A conjugate or fusion protein of formula:

wherein A is a protein or polypeptide which binds specifically to a target cell surface, B is optionally present, and comprises at least one molecule which binds to both A and (C)_n, C is an MHC/peptide complex, and n is a whole number ranging from 1 to 10.

Claim 2. (Original) The conjugate of claim 1, wherein B is absent, and n is 1.

Claim 3. (Currently amended) The conjugate of claim 2, wherein A is an antibody or a binding fragment of an antibody.

Claim 4. (Currently amended) The conjugate of claim 4-3, wherein A is an Fab' fragment of an antibody.

Claim 5. (Original) The conjugate of claim 2, wherein A is a single chain antibody.

Claim 6. (Original) The conjugate of claim 4, wherein C is a single chain MHC complex.

Claim 7. (Original) The conjugate of claim 5, wherein C is a single chain MHC complex.

Claim 8. (Original) The conjugate of claim 1, wherein A is an antibody, a ligand which binds to an antigen, or a ligand which binds to a differentiation marker overexpressed in tumor cells.

Application No.: 10/632,663

Docket No.: NY-LUD 5673.1 US (10307606)

- Claim 9. (Original) The conjugate of claim 1, wherein B is present.
- Claim 10. (Original) The conjugate of claim 5, wherein B comprises a streptavidin or avidin molecule, and from 1 to 4 biotinylated MHC molecules.
- Claim 11. (Original) The conjugate of claim 10, wherein B comprises a streptavidin molecule and 4 biotin molecules.
- Claim 12. (Original) The conjugate of claim 11, wherein A comprises an antibody binding fragment.
- Claim 13. (Original) The conjugate of claim 11, wherein A is an Fab' fragment.
- Claim 14. (Original) The conjugate of claim 1, wherein said MHC molecule comprises a tumor rejection antigen.
- Claim 15. (Original) The conjugate of claim 1, wherein said MHC molecule comprises an antigenic, viral peptide.
- Claims 16-21. (Canceled)
